

Phpbb je besplatan forum realizovan pod [GNU General Public License](#). Veoma se koristi I postoje mnogo dodataka, tema za ovaj forum, nije težak za odražavanje. U početku je ovaj forum dosta loše bio napravljen imao je dosta nedostataka, mada nova verzija 3 je dosta bolja.

Skinite sa [zvaničnog sajta poslednju verziju foruma](#), u vreme pisanja tutoriala to je verzija 3.0.4. Prebacite fajlove foruma na vaš host ili folder na vašem računaru koj koristite za vaš desktop server. Idite na lokaciju gde se nalazi *root* folder foruma.

Sada ste dobilo prozor u kome možete da pogledate informacije vezane za phpbb kao što su licenca, support I slično. Da bi ste instalirali forum kliknite na karticu goređ desno **Install**.

The screenshot shows the phpBB Installation Panel. At the top left is the phpBB logo. To the right is the text 'Installation Panel' and a language selector set to 'British English' with a 'Change' button. Below the logo are three tabs: 'OVERVIEW', 'INSTALL', and 'CONVERT'. The 'INSTALL' tab is active. On the left side of the main content area, there is a sidebar menu with 'Introduction' (selected), 'License', and 'Support'. The main content area has the heading 'Introduction' and the text 'Welcome to phpBB3!'. Below this, it describes phpBB3 as the most widely used open source bulletin board solution, highlighting its features and improvements over previous versions. It also mentions that the installation system will guide the user through installing phpBB3, updating from past releases, or converting from a different system like phpBB2. A link to the 'installation guide' is provided. At the bottom of the main content area, there is a footer with the URL 'www.draganmitic.com' and a small copyright notice: 'Powered by phpBB © 2000, 2002, 2005, 2007 phpBB Group'.

Note: U gornjem desnom uglu možete da izaberete jezik instalacije. Sa preuzimanjem poslednje verzije skidate samo Englesku instalaciju, ukoliko želite Srpsku potrebno je da je preuzmete sa sajta. Ja ću ovde objasniti Englesku instalaciju.

Sada ste dobili informacije o instalaciji. Obaveštava vas da morate da znate sve podatke o bazi I slično. Phpbb forum možete da instalirate na nekoliko baza podataka, a to su:

- MySQL 3.23 or above (MySQLi supported)
- PostgreSQL 7.3+
- SQLite 2.8.2+
- Firebird 2.0+
- MS SQL Server 2000 or above (directly or via ODBC)
- Oracle

Objasniću instalaciju na MySQL. Zato kliknite na **Proceed to next step**. U ovom koraku se proveravaju svi podaci da li su uredi I da li možete da instalirate forum na tom hostu/serveru.

Installation compatibility

Before proceeding with the full installation phpBB will carry out some tests on your server configuration and files to ensure that you are able to install and run phpBB. Please ensure you read through the results thoroughly and do not proceed until all the required tests are passed. If you wish to use any of the features depending on the optional tests, you should ensure that these tests are passed also.

PHP version and settings

Required - You must be running at least version 4.3.3 of PHP in order to install phpBB. If safe mode is displayed below your PHP installation is running in that mode. This will impose limitations on remote administration and similar features.

PHP version >= 4.3.3:	Yes
PHP setting register_globals is disabled: phpBB will still run if this setting is enabled, but if possible, it is recommended that register_globals is disabled on your PHP install for security reasons.	Yes
PHP setting allow_url_fopen is enabled: Optional - This setting is optional, however certain phpBB functions like off-site avatars will not work properly without it.	Yes
PHP function getimagesize() is available: Required - In order for phpBB to function correctly, the getimagesize function needs to be available.	Yes
PCRE UTF-8 support: phpBB will not run if your PHP installation is not compiled with UTF-8 support in the PCRE extension.	Yes

Installing extension check

Required - mbstring is a PHP extension that provides multibyte string functions. Certain features of mbstring are not compatible with phpBB and must be disabled.

Function overloading: mbstring.func_overload must be set to either 0 or 4.	Yes
Transparent character encoding: mbstring.encoding_translation must be set to 0.	Yes
HTTP input character conversion: mbstring.http_input must be set to pass.	Yes
HTTP output character conversion: mbstring.http_output must be set to pass.	Yes

Supported databases

Required - You must have support for at least one compatible database within PHP. If no database modules are shown as available you should contact your hosting provider or review the relevant PHP installation documentation for advice.

Firebird:	Unavailable
MySQL with MySQL Extension:	Available
MySQL:	Available
Microsoft Server 2000+:	Available
Microsoft Server 2000+ via ODBC:	Available
Oracle:	Unavailable
PostgreSQL 7.x/8.x:	Available
SQLite:	Available

Optional modules

Optional - These modules or applications are optional. However, if they are available they will enable extra features.

db compression support [gz, tar, zip, zip]:	Available
Remote FTP support [Installation]:	Available
GD graphics support [Visual Confirmation]:	Available
XML support [Jabber]:	Available
Imagemagick support [Attachments]:	Cannot determine location. If you know Imagemagick is installed, you may specify the location later within your administration control panel

Files and Directories

Required - In order to function correctly phpBB needs to be able to access or write to certain files or directories. If you see "Not Found" you need to create the relevant file or directory. If you see "Unwritable" you need to change the permissions on the file or directory to allow phpBB to write to it.

cache/:	Found, Writable
files/:	Found, Writable
store/:	Found, Writable

Optional files and directories

Optional - These files, directories or permission settings are not required. The installation system will attempt to use various techniques to create them if they do not exist or cannot be written to. However, the presence of these will speed installation.

config.php:	Found, Writable
images/avatars/upload/:	Found, Writable

www.draganmitic.com

Kliknite na **Start Install** da bi nastavili instalaciju. U sledećem koraku potrebno je da popunimo informacije o bazi podataka.

Database type: Možete da izaberete samo dostupne baze, izaberite *MySQL* ili *MySQL with MySQLi Extension*.

Database server hostname or DSN: Uglavnom je to *localhost* na većini servera.

Database server port: Ukoliko neznate ovu informaciju ostavite je praznu, što je I najverovatnije.

Database name: Ime baze podataka u koju će da smestimo forum.

Database username: Korisničko ime korisnika koj može da pristupi toj bazi.

Database password: Lozinka korisnika koj može da pristupi bazi.

Prefix for tables in database: Ukoliko ne instalirate više od jednog foruma ili neke druge programe ostavite kako jeste *phpbb_*.

Za sledeći korak kliknite na **Proceed to next step**. Ukoliko je sve uredi treba da piše **Successful connection**. Opet **Proceed to next step** :D. Sledeći korak ja da upišemo informacije o administratoru.

Default board language: Glavni jezik koj će se koristiti na forumu ukoliko niste skinuli drugi možete da izaberete samo Engleski. Naravno I kasnije možete da dodate druge.

Administrator username: Vaše korisničko ime koje će te da koristite na forumu.

Administrator password: Lozinka koju će te da koristite na forumu.

Confirm administrator password: Ponovite lozinku.

Contact e-mail address: Vaša email adresa.

Confirm contact e-mail: Ponovite email adresu.

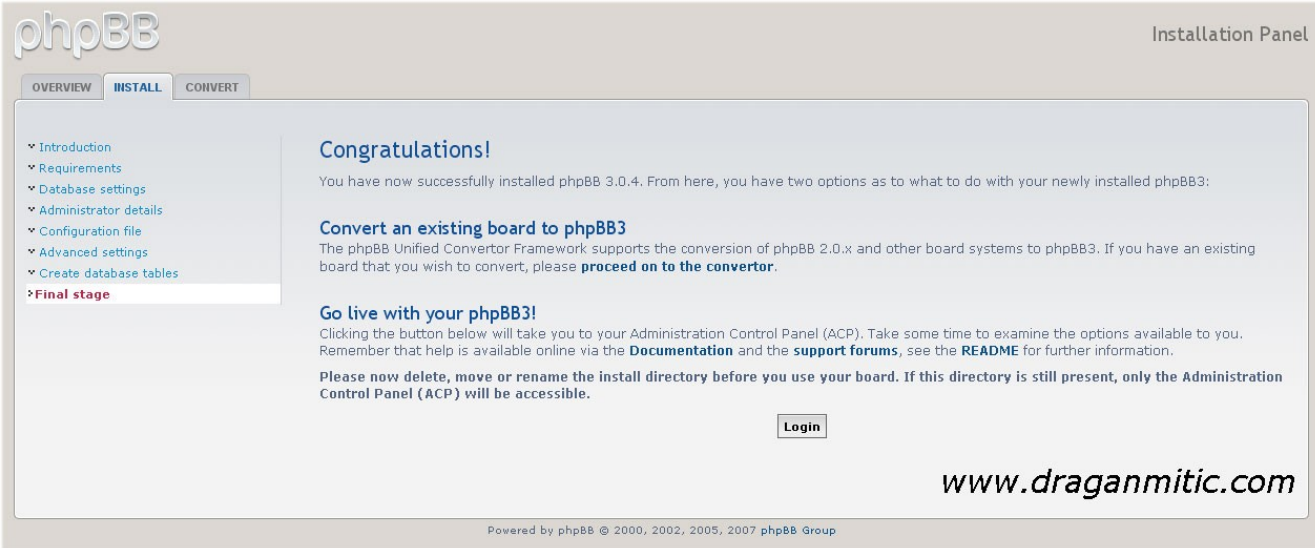

Idemo dalje, kliknite na **Proceed to next step**. Ukoliko je sve prošlo kako treba, trebalo bi da ste dobili poruku **Tests passed**. Idemo dalje kliknite na **Proceed to next step**. U ovom koraku bi trebali da dobijete poruku:

“The configuration file has been written. You may now proceed to the next step of the installation.”

Opet idemo dalje, **Proceed to next step**. Sledeći korak je Advanced Settings, I tu se podešavaju podaci o email I serveru. Ali te podatke nećemo sada dirati ve će mo da ih ostavimo onakve kakve jesu I ići ćemo dalje, **Proceed to next step**. U ovom sledećem koraku bi trebalo da ste dobili sledeću poruku:

“The database tables used by phpBB 3.0 have been created and populated with some initial data. Proceed to the next screen to finish installing phpBB.”

Sada idemo na poslednji korak. Tu trebate da dobijete poruku da je sve uspešno instalirano I da možete da krenete da koristite forum. Pre nego što krenete da ga koristite obrišite folder **install**.

The screenshot shows the phpBB Installation Panel. At the top left is the 'phpBB' logo, and at the top right is 'Installation Panel'. Below the logo are three tabs: 'OVERVIEW', 'INSTALL', and 'CONVERT'. The 'INSTALL' tab is active. On the left side, there is a navigation menu with the following items: Introduction, Requirements, Database settings, Administrator details, Configuration file, Advanced settings, Create database tables, and Final stage (highlighted in red). The main content area displays 'Congratulations!' and provides instructions for the user. It offers two options: 'Convert an existing board to phpBB3' and 'Go live with your phpBB3!'. A 'Login' button is visible at the bottom center. The website 'www.draganmitic.com' is displayed at the bottom right. At the very bottom, there is a small copyright notice: 'Powered by phpBB © 2000, 2002, 2005, 2007 phpBB Group'.
